

Anupalan — scale reference sheet

The millimetre measurements in every report are derived from this tag's known size.

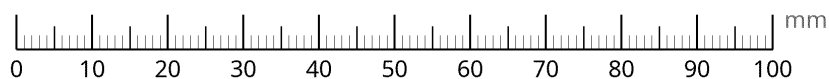

PRINT AT 100%. DO NOT USE “FIT TO PAGE” OR “SHRINK TO FIT”.

A printer that scales the page makes every millimetre in every report wrong by the same factor. Measure the ruler below before you use this sheet.

1 • Check the print scale

Lay a ruler along the scale below. 100 mm must measure 100 mm, and the tag above must measure 40 mm on every side. If either is off, reprint — do not proceed.

2 • Or use a standard card

Any ID-1 card — debit, credit, Aadhaar, driving licence — is 85.60×53.98 mm by standard.

Lay yours on the outline below. If it does not match exactly, it is not ID-1; use the tag.

85.60×53.98 mm

3 • Photograph the pack with the reference in frame

Lay the reference flat against the same face as the label, never on another side of the pack:

a reference on a different plane is measured at the wrong scale, and nothing warns you.

Keep all four corners in frame and the camera square — past about 25° the shutter is disabled.

Keep the tag flat and matte. A curled or glossy marker measures short, and a marker shown on a screen is never valid — its size is unknown and it is backlit. Print it, measure it, then photograph it with the pack.
